Trex decking and railing products contribute to LEED certifications on your commercial and residential projects.

LEED is a point-based system created in part by the U.S. Green Building Council (USGBC) to reward points to building projects that incorporate efficient and safe, eco-friendly products.

Trex decking products can add up to five points to a project – four points in the Materials and Resources category for being composed of up to 95% recycled materials, and one point in the Innovation and Design category.

Trex residential and commercial railing products also typically contribute to LEED certification points in the Materials and Resources category based on recycled aluminum, steel, stainless steel and glass content.

LEED-designated buildings (Silver, Gold or Platinum) tend to attract higher demand, premium rates and longer occupancy leases, thereby supporting continued and growing demand for products that can facilitate LEED designations.
